SUMMARY

Full-stack product engineer specializing in TypeScript, Next.js, and AWS with 4+ years building and shipping production applications. Proven track record delivering business-critical systems for inventory, ordering, and operational workflows used daily by operations teams. Strong product mindset with experience designing scalable solutions, working directly with stakeholders, and owning features end-to-end.

TECH STACK

TypeScript, JavaScript • React, Next.js, Tailwind CSS • Node.js, REST APIs, Authentication

AWS (Amplify, Lambda, S3, SES, CloudFront, Route53) • MongoDB, Prisma, PostgreSQL • Git, CI/CD

PROFESSIONAL EXPERIENCE

Dovi's Food Service — Product Engineer | Technical Manager, New York, NY Jan 2025 – Feb 2026

- Designed and delivered a full-stack operations platform used in daily production workflows for vendor ordering, inventory management, and reporting using Next.js, TypeScript, MongoDB, Prisma, and AWS
- Replaced fragmented Excel-based workflows with a centralized production system used daily across two locations, supporting 15–25 weekly vendor orders (~\$3M annual purchasing volume)
- Improved data consistency and reduced manual errors by automating reporting and inventory tracking, saving multiple staff hours per week
- Owned the full product lifecycle: requirements gathering, system design, database architecture, development, deployment, and ongoing production support
- Led migration to company-controlled AWS infrastructure to improve security, scalability, and maintainability

The Glimpse Group — Full Stack Engineer, New York, NY (Hybrid) Jun 2022 – Oct 2023

- Developed and maintained production web applications using Next.js, React, and TypeScript
- Integrated CMS, CRM, and analytics systems to support global marketing workflows
- Contributed to frontend and analytics features that improved conversion rates by ~40%
- Maintained AWS infrastructure and CI/CD pipelines for production deployments
- Collaborated within a multi-developer team while owning features end-to-end

Subway Realty Group — Office Manager | Webmaster, New York, NY Oct 2013 – Jun 2019

- Built company website and tenant application system with database-backed workflows
- Developed internal CRM dashboards to support a 12-agent team
- Supported operations contributing to 250+ annual rentals (~\$700K revenue)

SELECTED PROJECTS

EZ Food Service — Production SaaS platform for vendor ordering, inventory, and operational workflows

EZFoodService.io • Next.js • TypeScript • Prisma • MongoDB • AWS

- Designed and built a full-stack SaaS platform supporting multi-location operations, vendor management, order templates, and inventory workflows
- Developed scalable data models and APIs to support recurring ordering, reporting, and real-time ops use
- Implemented authentication, email automation (AWS SES), and production deployment infrastructure
- Actively onboarding early users and validating product-market fit through real-world usage

Goldyllocks Rental Tools — Real-estate workflow application built end-to-end

Goldyllocks.io • Next.js • Tailwind • NextAuth • MongoDB • AWS

- Built full-stack application to streamline rental workflows, applications, and property tracking
- Implemented authentication, database schema, and AWS deployment for a production-ready system

EDUCATION

B.S. Business Administration (Marketing), Ohio State University
